Professional Summary

Motivated and enthusiastic individual eager to begin a professional journey in DSA, AI/ML, and Cyber Security, with a strong technical foundation and a deep passion for continuous learning. I believe in learning from mistakes and continuously improving my skills. Passionate about building innovative solutions that contribute to a better and more secure future. Dedicated to applying analytical thinking to solve real-world problems and strengthen digital security infrastructures. Driven by a strong determination to contribute, innovate, and make a meaningful impact in future.

Professional Experience

Cyber Peace Corps: KIIT Chapter

Cybersecurity Member

Sept 2025 – Present
Bhubaneswar, Odisha

Actively participating in cybersecurity initiatives and campus-wide security awareness programs. Collaborating on technical workshops to educate students on safe digital practices and threat mitigation.

Infotact Solutions

Cyber Security Internship

May 2025 – Aug 2025
Remote

Gained hands-on experience in vulnerability assessment and network security protocols over 4 months. Implemented security scripts to automate threat detection and monitored system logs for suspicious activity.

AICTE-IBM / AICTE-Microsoft AI Azure

Cyber Security / AI Azure Intern

May 2025 – July 2025
Remote

Specialized in cloud-native security and AI implementation using Microsoft Azure and IBM security tools. Developed predictive models for anomaly detection within cloud infrastructures to prevent data breaches.

Vaishnav Technologies / Pinnacle Labs

Cyber Security Intern

May 2025 – July 2025
Remote

Conducted penetration testing on web applications and developed remediation strategies for identified flaws. Utilized industry-standard tools to simulate cyber-attacks and improve system resilience.

Education

KIIT University Bhubaneswar

Bachelor of Technology - Computer Science Engineering

July 2023 – Aug 2027
Bhubaneswar, Odisha

Delhi Public School Rourkela

Science (CBSE); 10th and 12th

April 2009 – March 2023
Rourkela, Odisha

Technical Projects

- Agentic AI Stock Market Trading:** Developed an autonomous AI agent using advanced LLM reasoning to perform real-time market analysis and execute trades.
Advantage: Minimizes human emotional bias and provides high-speed data processing to optimize financial decision-making in highly volatile market conditions.
- AI Fraud Detection System:** Engineered a machine learning pipeline to identify suspicious patterns and anomalies within large-scale financial transaction datasets.
Advantage: Protects digital banking users by detecting fraudulent activities instantly, significantly reducing financial risk for both individuals and global institutions.
- Bluetooth Chat Application:** Built a decentralized Android messaging platform that enables secure, short-range communication without reliance on internet or cellular networks.
Advantage: Serves as a critical communication lifeline in disaster-stricken zones or remote areas, ensuring that connectivity remains accessible during infrastructure failures.
- WiFi Security Analyzer:** Created a comprehensive network auditing tool to scan for encryption vulnerabilities, weak protocols, and unauthorized access points.

Advantage: Empowers home and small business owners to safeguard their private data from hackers attempting to intercept wireless traffic in public or residential spaces.

- **Basic Cryptography Suite:** Implemented a robust collection of cryptographic algorithms, including AES and RSA, for secure data encryption and decryption processes.

Advantage: Ensures end-to-end data privacy for messaging and file storage, preventing unauthorized third parties from accessing or tampering with sensitive personal information.

- **Anonymous FTP Scanner:** Developed a Python-based security tool to identify misconfigured FTP servers that allow unauthenticated or anonymous access to internal directories.

Advantage: Helps organizations proactively identify and patch critical data leakages before malicious actors can exploit them to steal intellectual property or private records.

- **Secure Linux Server Setup Hardening:** Implemented rigorous security hardening protocols on Virtual Machines, including SSH optimization, firewall configuration, and user permission auditing.

Advantage: Minimizes the server attack surface to prevent unauthorized breaches, ensuring a stable and secure environment for hosting critical web and enterprise services.

- **Brute Force FTP Accounts:** Created a Python-based penetration testing tool to evaluate the strength of FTP credentials against dictionary and automated brute-force attacks.

Advantage: Assists system administrators in identifying and remediating weak authentication points, strengthening the overall security posture against credential-based exploits.

- **Find Deleted Files:** Developed a forensic Python script designed to scan storage blocks and recover deleted documents, images, and system files from various partitions.

Advantage: Provides a reliable data recovery solution for retrieving critical lost information, whether due to accidental deletion or malicious system wiping attempts.

- **Port Scanner:** Built a high-performance network reconnaissance tool that discovers open ports and identifies active services running on a target host.

Advantage: Enhances network visibility for security professionals, allowing them to close unnecessary services and ensure only essential, secured channels are exposed.

- **File Password Cracker:** Engineered a multithreaded recovery tool for regaining access to password-protected archives and encrypted files using advanced wordlists.

Advantage: Supports lawful data recovery and encryption strength testing, helping users regain access to locked assets while evaluating the effectiveness of their passwords.

Key Certifications

- **Stanford & Deep Learning.AI:** Machine Learning Specialization
- **Meta:** Front-End, Android, iOS and Back-End Developer Specializations
- **Stanford University:** Algorithms Specialization
- **Deep Learning.AI:** Mathematics, Generative AI, NLP and Deep Learning Specializations
- **Intel, AWS & IBM:** Intel AI Fundamentals, AWS Fundamentals and IBM Data Science Specializations
- **UCSC, UCSD and Duke University:** C/C++, DSA and Java/Software Engineering Specializations
- **Google:** Cybersecurity, IT Support, IT Automation with Python and Project Management Specializations
- **Microsoft:** AI & ML Engineering, Cybersecurity, Microsoft 365 and Power Platform and Copilot Specializations
- **Cisco & Palo Alto:** Cisco Cybersecurity Operation Fundamentals and Palo Alto Cybersecurity Specializations

Technical Skills

Programming: Python, Java, C/C++, PowerShell, SQL, DSA, Linux System Administration.

Tools: Tenable Nessus, Nmap, Wireshark, Burp Suite, Metasploit, Kali Linux, John the Ripper.

Cloud/Data: AWS, Azure, Google Cloud, MySQL, Pandas, Scikit-Learn, Numpy, Matplotlib, TensorFlow.

Additional Information

Languages: English, Hindi, Odia (Native), French (Elementary), Russian (Elementary).

Hobbies: Comics Illustrator, Painter, Tech Explorer, Badminton, Basketball, Traveller, Foodie.
